PROJECT *OCEANOLOGY*

Facebook Live: Habitat Preference- Shore Crabs

Intertidal Zone

Description: Very rocky, sometimes covered by water, sometimes exposed to air, subject to wave action, marine algae

Salt Marsh

Description: Muddy bottom, slow-moving waters, grasses on shore with peat, phytoplankton-rich

Make a prediction about which habitat each living thing prefers. Be sure to explain your reasoning. Consider what the conditions are like in the intertidal zone and the salt marsh and how the living things may be adapted to survive there.

1. Fiddler Crab

2. Barnacles

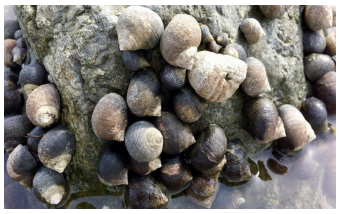
3. Blue Mussels

4. Egret

5. Asian Shore Crab

6. Sea Star

7. Periwinkle Snail



8. Pickleweed
