

PROJECT OCEANOLOGY

1.	Why do you think the silversides were present where you seined?
2.	Did you capture any other organisms in the seine net? List them here:
3.	Did you observe any additional organisms at the beach today - in the water, on the land, or in the air? List them here:
4	For a few of the erganisms you listed in #2 and #2 above, make a prediction about why
4.	For a few of the organisms you listed in #2 and #3 above, make a prediction about why you think they were present:

5.	How did the silversides you captured compare in size with the sample dataset? Were your silversides generally smaller, larger, or the same size? Propose an explanation:
6.	How could you test whether your explanation is correct? Describe a scientific study you could conduct to test your hypothesis:
